                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         children, pneumonia in the elderly, sinusitis, nosocomial infections and invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infection of the upper respiratory tract and middle ear infection. They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the normal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are resistant to standard antibiotics. The BASB019 products of the invention can be used screen for new antibacterial compounds that may target these

The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for identification, identifications, serotype, organism or strain components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as also be used in vaccine formulations, and to identify agonists and also be used in vaccine formulations, and to identify agonists and also be used in vaccine formulations, and to identify agonists and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            resistant bacteria.

This sequence is a Moraxella catarrhalis BASB019 protein of the CC invention. The sequences can be used for diagnosis of disease, staging of components of or determining response of an infectious organism to drugs. The CC polynucleotides may be used as a source for hybridisation probes, and for cidentification, identification of mutation in BASB013 sequences, and as components of arrays which are useful for diagnostic and prognostic components of arrays which are useful for diagnostic and prognostic components of recening of antimicrobial drugs. The polypeptides can be used to produce antibodies, and as a cc also be used in vaccine formulations, and to identify agonists and catagonists. The polypeptides, antibodies, agonists and antagonists and components. The polypeptides, antibodies, agonists and arrayonists and contagonists. The polypeptides, antibodies, agonists and arrayonists and contagonists. The polypeptides, antibodies, agonists and arrayonists and contagonists. The polypeptides, antibodies, agonists and prevention of diseases including bacterial infection, otitis media in infacts and contagonists and contagonists. The polypeptides used for the treatment and prevention of contagonists and contagonists and contagonists and contagonists and contagonists and contagonists. The polypeptides and the infections and diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, suditive nerve damage, delayed speech contagonists and contagonists and accumulation of the upper respiratory tract and middle ear to eukaryotic matrix proteins on in-dwelling devices, or to extracellular contagonists and to thus prevent tissue damage and/or block the contagonist and to the proteins on infections initiated other than by the infection of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically can be used screen for new antibacterial compounds that may threet these

The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and antagonists and antagonists are used for the treatment and prevention of (which are bacteristatic) are used for the treatment and prevention of diseases including bacterial infection, otitis media in infants and children, pneumonia in the elderly, sinusitis, nosocomial infections and invasive diseases, chronic otitis media with hearing loss, fluid annually accompanies of the children of the children
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-MAY-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                accumulation in the middle ear, auditive nerve damage, delayed speech learning, infection of the upper respiratory tract and middle ear infection. They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the normal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are resistant to standard antibiotics. The BASBO19 products of the invention can be used screen for new antibacterial compounds that may target these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ruelle J;

The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel BASB019 polynucleotides and polypeptides from Moraxella catarrhalis used to prepare vaccines against bacterial infections

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         An epitope of this protein is recognised by the 7F3 antibody in a number of isolates. Monoclonal antibodies to the 16600 D OMP are produced by hybridomas and used to detect H.influenzae. A suspect sample is contacted with the MAb in the presence of an indicator

                  The PBOMP proteins were isolated from a PBOMP-enriched insoluble cell wall fraction from physically disrupted cells of H. influenze and then solubilising the PBOMP from the cell wall fraction by heating in the presence of a detergent or digesting the cell wall fraction with lysozyme, opt. in the presence of a detergent. The genes encoding the PBOMP proteins were isolated by screening a DNA library with an oligonucleotide probe based on the amino acid sequence of the PBOMP protein, or using antibodies to PBOMP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         An epitope of this protein is recognised by the 7F3 antibody in a number of isolates. Monoclonal antibodies to the 16600 D OMP are produced by hybridomas and used to detect H.influenzae. A suspect sample is contacted with the MAb in the presence of an indicator

                                                                                                                                                                                                                                                                                                                                                                                                                                The P6 outer membrane protein (OMP) is conserved among strains of Haemophilus influenzas and so antibodies to the OMP can be used to identify H. influenzas in clinical samples. The OMP can also be used in the development of vaccines against H. influenzas which causes pneumonia, bacteraemia, meningitis, postpartum sepsis and acute febrile tracheobronchitis in adults and neonatal sepsis and

                                                                                                                                                                                                                                                                                                                                                                                              This sequence is a H. pylori outer membrane protein.

The protein may be used in a vaccine to prevent or treat H. pylori
infection or to identify H. pylori polypeptide binding compounds,
useful as potential H. pylori life cycle activators or inhibitors.

The genomic sequence of H. pylori (ATCC 55679) was determined from
coverlapping contigs generated by mechanically shearing the bacterial
and the predicted coding regions defined by computer evaluation. To
dentify likely H. pylori antigens for vaccine development, the amino
daid sequences predicted from various ORF were analysed for significant
and determined the sequences of interest, particular regions can be
isolated from H. pylori by PCR amplification for recombinant polypeptide
production, e.g. in E. coli hosts.

Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. pylori whole genomic DNA was isolated and nebulised to a median size of BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary to the BstXI-cut pMPX vectors, while the overhang is not self-complementary. Therefore the linkers will not concatemerise nor were ligated to each of the 20 pMPX vectors to construct a series of shotgum subclone libraries. The purified DNA samples were then
                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen; immunogenic cluster family; vaccine; gastritis; diagnosis; peptic ulcer; gastric adenocarcinoma; gastric lymphoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel preparation of an agent (A) for detection, prevention and/or treatment of microbial infection by:

(I) identifying essential genes (I) and corresponding polypeptides (II); (II) identifying compounds that are directed against (II) and (II); (II) formulating selected (A). Identifying essential genes (I) comprises (IV) formulating selected (A). Identifying essential genes (I) comprises (IV) formulating selected (A). Identifying essential genes (I) comprises (IV) formulating selected (A). Identifying essential genes (I) comprises (IV) formulating selected (A). Identifying essential genes (I) comprises (IV) formulating selected (A) and/or subtractive recombination mutagenesis (SRM). (C) inhibition (CAI) and/or subtractive recombination mutagenesis (SRM). (C) inhibition for the invention have annibacterial activity. (A) (which may comprise the products of the invention have annibacterial activity. (A) (which may compressed in III) in the products of the invention of note cell containing (IA), derived (C) comprise or an inhibitor of (IIA) are particularly used for diagnosis, (IIA) are used in DNA, subunit or live vaccines. The method (IIA) and (IIA) are used in DNA, subunit or live vaccines in other (IIA) containing the sectivity. Many containing the broad spectrum of activity. Many

                                                                                                                                                                                                                                                                                                                                                                                                          identifies essential genes, including those that have homologs in other species, so identified (A) should have a broad spectrum of activity. Many gene-deficient cells can be screened quickly, in an automated process, and the identified genes can be used for screening without purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-JUN-1999;

                                                                                                                                                                                                                                                                                                                           This sequence is a H. pylori outer membrane protein.

C The protein may be used in a vaccine to prevent or treat H. pylori confection or to identify H. pylori polypeptide binding compounds, and in the protential H. pylori life cycle activators or inhibitors. The sequence of H. pylori (ATCC 55679) was determined from CC ONA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To conditify likely H. pylori antigens for vaccine development, the amino can determined the sequences of interest, particular regions can be considered from H. pylori by PCR amplification for recombinant polypeptide yrv

                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting antisedy-detection assays, on sera, plasma, urine, saliva etc., they are previously unrecognised immunogenic cluster families. H. pylori antigens infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This amino acid sequence of Omp22, is a recombinant outer membrane protein which is identical to the mature protein of its native form (see AAW23592). It retains antigenicity and immunogenicity against Helicobacter pylori. This recombinant Omp22 protein can be mass produced in via expression in E.coli DH5-Alpha cells. H. pylori is associated with inflammation of the stomach and gastritis related diseases e.g. with inflammation of the stomach and gastritis related diseases e.g. peptic ulcers and gastric cancer. The native and the recombinant form of Omp22 could be used in immunological therapy as a H. Pylori-specific antigen for the treatment and prevention of diseases associated with this microorganism e.g. as the active ingredient in a diagnostic kit or a prophylactic/therapeutic vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gastritis; peptic ulcers; gastric cancer; diagnostic; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Helicobacter pylori.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             recombinant protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in nucleotides sequences can also be used as immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

The omp P6 precursor polynucleotide, polypeptide and its antibody are useful for detecting, preventing and treating chlamydia infections e.g. pneumonia, upper respiratory treat (e.g. cough, sore throat). C. pneumoniae infection is also observed to be associated with atherosclerosis and asthma. Immunogenic fragments of omp P6 precursor protein and their corresponding DNAs are useful in vaccine composition. The polynucleotide is useful in the construction of attenuated Chlamydia strains that can over express the polynucleotide or express it in a non-toxic, mutated form. The omp P6 probes are useful in diagnostic methods involving PCR (polymerase chain reaction).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     also involved in the development of cardiovascular diseases such as atherosclerosis, coronary artery disease, carotid artery stenosis, anyocardial infarction, cerebrovascular disease, carotid artery stenosis, envolved in the invention claudication and stroke. The proteins and nucleic acids of the invention was the used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of chamydia pneumoniae, and the nucleic acids may be used in PCR, branched DNA probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a specifically claimed Chlamydia pneumoniae protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia pneumoniae, and for diagnostic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 60; 364pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-OCT-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                             AAB20105 standard; Protein; 224 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye paratrachoma, and inclusion conjunctivitis; genital diseases such as conventional trachoma, nonendemic trachoma, nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                                       antibacterial; antimicrobial.
                                                                                                                                                                                                                                                                                                                                                                            23-APR-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 1248-1249; 1755pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BASBILI polypeptides, and polynucleotides encoding them, as well as cexpression vectors, host cells and methods for producing BASBILI accomposition comprising a BASBILI polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASBILI polypeptide, an immunogenic composition comprising a BASBILI polypeptide, or a polypeptide having at least composition oxid sequence identity to BASBILI, or comprising a polypeptide encoding such a polypeptide. A claimed method of composition and a diagnosing a woraxella infection involves identifying a BASBILI composition useful composition with M. catarrhalis infection composition useful contracted against a BASBILI polypeptide. BASBILI composition comprises at least polypeptides also have utility in raising specific antibodies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13-FEB-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   non-typeable H. influenzae. One or more surface exposed loops of this protein may be replaced with a modified peptide of the invention. Each of these peptides contain an LBI(f) peptide which is a 19 amino acid peptide derived from the sequence of MOMP P5 from strain ntHill28, representing amino acids Argl17 to G1y135. This peptide represents the third exposed loop of P5 and is a potential B cell epitope. The loops of the invention are modified in terms of being in a non-native
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant bacterial outer membrane protein where one or more surface-exposed loops are modified is useful as a vaccine to prevent or treat Haemophilus influenzae infection or associated disease, e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                environment in the recombinant outer membrane protein. The modi MOMP P5 may be used to induce an immune response in a mammal to prevent or treat Haemophilus influenzae infection or associated disease, e.g., otitis media, sinusitis, conjunctivitis, or lower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the major outer membrane protein P5 of non-typeable H. influenzae. One or more surface exposed loops of this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein was expressed in Escherichia coli and Saccharomyces cerevisiae transformants. The oprF-oprI hybrid protein, and antibodies raised against it, conferred protection against P. aeruginosa infection in laboratory animals. The hybrid protein was significantly more immunogenic than an oprI-oprF fusion (AAR99627).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A cDNA sequence (AAT32600) codes for a fusion (AAR99626) between amino acids 192-342 of the outer membrane protein F (oprF) and amino acids 21-83 of outer membrane protein I (oprI) of Pseudomonas aeruginosa ATCC 33354. A glutathione-S-transferase fusion with the hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fusion proteins for Pseudomonas aeruginosa vaccines - contgragments of outer membrane proteins I and {\bf F}.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB; AAT32600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1996-279559/29.

                           A cDNA sequence (AAT32599) codes for the C-terminal region, amino acids 190-350 (AAR99625), of the Pseudomonas acruginosa ATCC 33354 outer membrane protein F (oprF). A hybrid protein between glutathione-5-transferase and the OprF moiety was expressed in Escherichia coli. OprF-OprI (AAR99626) and OprI-OprF (AAR99627) fusion proteins were also prepd. and tested for their efficacy as vaccines
 Sequence
                       proteins were also prepd. and te against P. aeruginosa infection.
                                                                                                                                         Disclosure; Page 11-12; 23pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-OCT-1996 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR99625;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a Campylobacter jejuni or Campylobacter coli fibronectin binding protein (CadF). A recombinant expression vector with cadF is useful in an assay for determining the presence of C.jejuni or C.coli in a test sample or for determining whether a test isolate of Campylobacter is a strain of C.coli. cadF is useful in the construction of DNA probes for identifying and quantifying the level of expression of CadF in a cell. The gene can also be used in a vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAP82053 standard; protein; 350 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Outer membrane protein F; OMPF; vaccination; antibodies.
                                                                                                                                                                                                                                                lambda EMBL 3. One positive clone includes a 15 kb insert conty. The protein gene, which can be isolated as a 2.5 kb PStI fragment. This fragment cannot be cloned int a high copy no. vector because of the toxicity of the gene prod. . so is subcloned as two fragments with an overlapping region of about 500bp. Ab's are raised by usual immunisation or cell-fusion procedures. The Ab's are useful in diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pseudomonas aeruginosa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22-OCT-1990 (first entry)
                                                                                                                                                                                                                                                                                                                                                        The protein is isolated from the OMP of P. aeruginosa serotype 6 ATTCC 33354) and purified by HPLC. The amino-terminal and trypsin fragments are sequenced and a series of oligonucleotide probes constructed corresponding to the established sequences. These probes used to screen a gene bank of 15-20 kb fragments of genomic DNA in used to screen a gene bank of 15-20 kb fragments of genomic DNA in the contractions of the contractions includes a 15 kb insert conty. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New outer membrane protein {\tt F} of Pseudomonas aeruginosa DNA sequences encoding it and derived antibodies, usefu vaccination and diagnosis.

                   Actinobacillus pleuropneumoniae
                                          dual immune response; immunogen; pleuropneumonia.
                                                                                                                                                       AAY96098;
                                                                                                                                                                        AAY96098 standard; Protein; 369 AA
                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                 determining whether a test isolate of Campylobacter is a strain of C.coli. cadf is useful in the construction of DNA probes for identifying and quantifying the level of expression of Cadf in a cell. The gene can also be used in a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a Campylobacter jejuni or Campylobacter coli fibronectin binding protein (CadF). A recombinant expression vector with cadF is useful in an assay for determining the presence of C. Jejuni or C. coli in a test sample or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated polynucleotide useful for producing fibronectin binding proteins which are useful in production of vaccine, in diagnostic assays and for prophylactic and therapeutic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Column 37-40; 29pp; English.

  Actinobacillus pleuropneumoniae strain Pz420
                                  OmpA2; outer membrane protein; APP; pneumonic pathogen; swine; Sus scrofa; serotype; antigen; vaccine; cross-reactive immunity; cross-protection; diagnosis.
                                                                                                               Actinobacillus pleuropneumoniae outer membrane protein, OmpA2.
                                                                                                                                                             11-SEP-2000 (first entry)
                                                                                                                                                                                                                                      AAY97900 standard; Protein; 369
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vertebrate; and a second protein, which is an immunogen from a pathogen capable of infecting the vertebrate, and which causes the vertebrate's immune system to recognise the first protein, producing a response that inhibits the activity of the first protein, and also protecting the vertebrate from infection by the pathogen when the vertebrate is vaccinated with the fusion protein. In the present case, a fusion protein of cholecystokinin and Ompha is useful for encouraging appetite in swine while simultaneously providing a protective immune response against porcine
                                                                                                                                                                                                          AAY97900;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Actinobacillus pleuropneumoniae. OmpA2 can be utilised in fusion proteins of the invention that are used as vaccines eliciting a dual immune response. Such fusion proteins comprise: a first protein that is endogenous to a vertebrate, the activity of which is to be inhibited within the vertebrate, and which is incapable by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 58-60; 93pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             itself of eliciting an effective immunoinhibitory response in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of outer membrane protein OmpA2 of Actinobacillus pleuropneumoniae. OmpA2 can be utilised in fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel fusion protein for producing a dual immune response comprises a peptide analogous to an endogenous peptide which is to be inhibited, connected to a peptide analogous to an immunogen from a pathogen which

This sequence represents a low molecular weight outer membrane CC protein, OmpAA, from Actinobacillus pleuropneumoniae (APP) strain CC pz420 (ATCC 98930). The invention relates to the novel APP outer CC pz420 (ATCC 98930). The invention relates to the novel APP outer CC membrane proteins omp20, OmpM, Omp27, OmpA1 and OmpA2 (AAV979986-Y97900) CC membrane proteins omp20, OmpM, Omp27, OmpA1 and OmpA2 (AAV979986-Y97900) CC and to nucleic acids encoding them (AAA38554-A38558). APP is a Gram CC engative coccobacillus which is one of the most important swine CC which vary in geographic distribution. Prior art attempts at vaccinating CC against APP have produced mainly serotype-specific immune responses. In CC contrast, natural immunity to any one serotype seems to confer CC significant protection from disease caused by other serotypes, suggesting CC that natural exposure induces cross-reactive immunity to shared antigens. CC The novel outer membrane proteins of the invention are present in all 12 cc serotypes, and may provide a target for cross-protective immunisation. CC used as a vaccine against APP in swine. They can also be used as CC used as a vaccine against APP in swine. They can also be used as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence gene. The virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and bacterial infections such as septicemias, bronchopneumonias, rhinitis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Attenuated Pasteurellaceae bacteria comprising mutations in virulence genes, useful as a live attenuated vaccine against bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-APR-2000; 2000WO-US09218

These can be used to produce vaccines which protect against M. catarrhalis infection, which can otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a protein of the invention.

The present sequence is that of the HagA haemagglutinin of C Haemophilus paragallinarum strain 2403 (serovar A), the causative agent of infectious coryza in chickens. The invention provides C recombinant haemagglutinin polypeptides (see AAM50716-27) and C encoding nucleic acids (see ABA91417-27) from 11 strains (serovars C a, B and C) of H. paragallinarum, the causative agent of infectious C coryza of chickens. The polypeptides are useful in vaccines for C coryza of chickens the polypeptides are useful in vaccines for C when expressed in attenuated bacteria, especially Salmonella or Mycoplasma (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or C derivative, that is capable of eliciting an immune response, or provide of the mature protein agrainst one of the combinant polypeptide is preferably C derivative, that is capable of eliciting an immune response,

The invention provides CC recombinant haemagglutinin polypeptides (see AAM50716-27) and CC encoding nucleic acids (see ABA91417-27) from 11 strains (serovars CC A, B and C) of H. paragallinarum, the causative agent of infectious CC immunisation against infectious coryza, as are the nucleic acids cimmunisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or CC when expressed in attenuated bacteria, especially Salmonella or CC the mature protein, or a biologically active fragment, variant or CC derivative, that is capable of eliciting an immune response, CC paragallinarum in chickens. Also claimed are methods of using the CC paragallinarum in chickens. Also claimed are methods of infectious CC diagnosis of infectious coryza in chickens.

The present sequence is that of the HagA haemagglutinin of C Haemophilus paragallinarum strain 2671 (serovar B), the causative agent of infectious coryza in chickens. The invention provides crecombinant haemagglutinin polypeptides (see AMS0716-27) and crecombinant haemagglutinin polypeptides (see AMS0716-27) and C and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for c immunisation against infectious coryza, as are the nucleic acids c when expressed in attenuated bacteria, especially Salmonella or CC when expressed in attenuated bacteria, especially Salmonella or CC the mature protein, or a biologically active fragment, variant or CC cervative, that is capable of eliciting an immune response, c providing protection against one or more strains of H. CC paragallinarum in chickens. Also claimed are methods of using the CC diagnosis of infectious coryza in chickens.
